

RAILWAY SYSTEMS PROJECT MANAGER

Description

We are looking for Railway Systems Project Manager, whose main purpose is to ensure that railway systems are meticulously designed, integrated and commissioned in Estonia.

Responsibilities

Responsibilities:

- Taking part in the integration process of various subsystems and components to ensure seamless operation of the railway system as a whole.
- Evaluating technical proposals, designs, and specifications from contractors and suppliers to ensure compliance with project requirements and standards.
- Overseeing construction, testing, commissioning, and acceptance of railway systems to ensure they meet performance, safety, and reliability requirements.

Qualifications

Qualifications:

- At least 5 years of experience as a project manager in construction management, design management or owner supervision.
- Diploma/Degree in Electrical/Electronic/Mechanical or Telecommunications Engineering is essential.
- Familiarity with construction regulations, permits, and compliance standards.
- Multi-discipline working knowledge of Railway systems
- Proficiency in English.
- Category B driving license.

Job Benefits

Job Benefits:

- Flexible, ergonomic and modern work environment.
- Hybrid working role.
- 100% sick pay from the first day of sick leave.
- Individual training budget.
- Sports allowance and/or health insurance.
- Home office equipment allowance.
- Free parking next to the office.
- Team events.
- ... and much more!
