

RAILWAY SYSTEMS SENIOR PROJECT MANAGER

Description

The goal of Railway Systems Senior Project Manager is to ensure that railway systems are meticulously designed, integrated, and commissioned to uphold the necessary standards for performance, safety, and reliability, and ensuring the implementation of railway signalling systems is done within the agreed budget and time frame.

Responsibilities

Responsibilities:

- Update requirements, workflows and processes;
- Provide technical expertise to project teams and contractors, as well as monitor the contractual works;
- Take part in the integration process of subsystems to ensure seamless operation of the railway system;
- Conduct complex technical analysis and design reviews for all aspects of railway systems.

Qualifications

Qualification:

- Degree in electrical, electronic, mechanical or telecommunications engineering;
- Experience as a project manager in construction management, design management or owner supervision;
- Familiarity with construction regulations, permits, compliance standards and contract management;
- Multi-discipline working knowledge of Railway systems – Signalling, Telecoms;
- Category B driving licence;
- Fluent in English.

Job Benefits

Jump on “the train” and a modern, ergonomic and flexible work environment awaits you: an attractive motivation package, which includes, among other things, support for setting up a home office and sport activities; parking in the city center; self-development and individual training budget and many other exciting things!
